Bio-Brew Fish Hydrolysate

Bio-Brew Fish Hydrolysate is a highly nutritional product utilizing naturally occurring enzymes present in fresh North Atlantic fish. When added to the soil, the vitamins, amino acids, enzymes, and growth hormones, stimulates excellent plant growth, makes nitrogen compounds more available to roots and enhances biological function within the soil. When used with brewing or applying compost tea, fish hydrolysate will greatly multiply and support beneficial microbes.

Caution: Keep Away From Children Keep From Freezing
